

For support in the project “digital logistics”, we are currently looking for

Student assistants (m/f/d)

with weekly between 8 and 12 hours.

In the project “digital logistics”, we support innovative logistics concepts by developing data-driven optimization methods. Student assistants are offered the chance to get exciting insights into cooperative projects with enterprises of the logistics sector.

Requirements

Highly motivated students who would like to support us in the development of the applications should have the following competences:

- Programming skills
- Software skills in simulation, optimization or statistics programs
- Motivation and team spirit, independent and reliable working attitude

Application

We look forward to receiving your electronic application, including cv and current transcript of records. Please send your documents by October 31, 2022 via email to:
