

## WHO WE ARE

**We are Seatti** — a fast-growing startup **helping enterprises enable hybrid work at scale**. Our SaaS solution empowers employees to coordinate their in-office days, book workspaces, and meet with colleagues — all seamlessly integrated into Microsoft Teams and Outlook.

**Our vision:** To make hybrid work more connected, productive, and data-driven.

## WHY WE NEED YOU

We are now launching one of our most strategic product extensions: **Automatic Office Check-ins**.

This system aims to detect when employees are in the office without requiring manual input — solving a long-standing pain point for both employees and workplace administrators.

**Your mission** will be to help shape, validate, and potentially prototype this functionality — considering technical feasibility, user experience, and organizational constraints like privacy and deployment.

## Project Focus – Intelligent Automatic Check-Ins

### Goal

Design a system that detects office presence automatically (e.g., via IP address or docking station MAC address), offering value to employees and accurate utilization data to admins — while meeting high standards of privacy, security, and usability.

## Your Scope Could Include\*

\*based on your interests and background

### 1. Concept & Validation

- Evaluate location detection methods (IP, Docking Station ID, etc.)
- Analyze trade-offs: accuracy, privacy concerns, operational effort
- Create user flows for opt-in/out mechanisms and check-in UX
- Validate with feedback from Seatti's pilot partners

### 2. Prototyping & Integration

- Explore how a Windows-native app could integrate with SSO to detect presence (e.g. via Microsoft Intune deployment)
- Identify backend data sources and protocols for passive presence signals
- Draft technical architecture for rollout in enterprise environments

## WHAT WE OFFER YOU

- ✓ Be part of our journey from the ground up
- ✓ Work closely with our founding team
- ✓ Full flexibility: Working student, intern, or thesis project
- ✓ Build something real with pilot clients ready to pay and launch
- ✓ Learn about SaaS, enterprise tech, and hybrid work from the inside
